Name of the Website : CAFÉ REVERIE

Name of the Database : café

Database creation – MySQL command line client

Languages used to code the website:

- HTML – For structuring web pages
- CSS – For styling
- JavaScript – For Client side interactivity and dynamic content
- PHP – Used Apache here
- SQL

NOTE :

The starting page of the website is the Homepage (index.html)

INTRODUCTION

Cafe Reverie is a dynamic web-based application designed to streamline the operations of a café, focusing on both sales and marketing functionalities.

The platform offers a user-friendly interface for customers to browse the café's offerings, and interact with the brand through features like reviews and comments. At the same time, it empowers administrators to manage products, monitor inventory, and handle customer feedback efficiently.

By integrating a robust sales system with marketing elements, Cafe Reverie aims to enhance customer engagement and operational efficiency.

OUR GOALS

- ✓ To create a functional web application that supports the day-to-day operations of a café, including product management and sales tracking.
- ✓ To provide a seamless user experience for both customers and administrators, enabling easy navigation and feedback mechanisms.
- ✓ To incorporate marketing tools like customer reviews and promotions to boost customer engagement and drive sales.

OUR OBJECTIVES

- ✓ Develop an intuitive and responsive user interface: Ensure the application is visually appealing.
- ✓ Streamline sales operations: Provide functionalities for managing product listings, updating stock levels.
- ✓ Enhance Customer Interaction: Include review and comment features that allow users to engage with the brand and share their feedback.
- ✓ Enable effective administration: Implement admin control for updating products, review comments and moderating contents.

FUNCTIONALITY OVERVIEW

Home page (index.html) :

The home page of CAFÉ REVERIE serves as the welcoming entry point for users, featuring a brief idea of the café's ambiance and offerings.

The navigation bar, located at the top provides quick access to essential sections of the website including the About us page and the Help Desk page .

And displays buttons for visit to the Signup and Login pages.

The overall design ensures easy navigation while inviting users to explore the café's unique experience, whether for making purchases or learning more about the brand.

Help page (HelpDesk.html) :

The Help Desk section is designed to assist users with common inquiries and provide a direct line for support. It includes:

- FAQ (Frequently Asked Questions): A list of common questions and answers related to the café. This helps users quickly find solutions to common issues without needing to contact support.

GROUP 21

- **Contact Us:** A form that allows users to reach out to the café's support team for personalized assistance. Users can submit their name, email, and message to report issues, ask specific questions, or provide feedback.

About Us page (abtus.html) :

The About Us page of Café Reverie introduces visitors to the café's core values and vision. It highlights the team's passion for baking and hospitality, emphasizing their commitment to offering high-quality homemade products. The page also outlines the café's mission to blend tradition with modern technology, creating a seamless experience for online customers. Additionally, it explains why Café Reverie stands out by offering a platform that combines convenience with the warmth of traditional café culture.

Login page (userlogin.php) :

The login page of the café's online sales and market system serves as a gateway for both users and administrators to access their respective dashboards.

The page consists of three key input fields: Username, Password, and Role.

Sign Up page (signup.php) :

The Sign-Up page allows new users and admins to create accounts by providing username, password and role (admin or user).

GROUP 21

Admin Dashboard (admin_dashboard.php) :

If the Role is selected as Admin, in login, the user is redirected to the Admin Dashboard. The admin dashboard provides features Manage products and Manage reviews and Manage Users.

1. Manage Products (admin.php) :-

The Manage Products section allows the admin to maintain the café's inventory by managing stock levels. This section includes the following functionalities:

- Add Stocks: Admins can increase the stock levels of existing products by selecting the product and specifying the quantity to be added.
- Remove Stocks: Admins can decrease the stock levels by removing quantities from the selected product.

Once confirmed, the stock is updated successfully in the system, ensuring that the available quantity is accurate for customer orders.

The screenshot shows a web browser window with the URL `localhost/CafeReverie/admin.php`. The page has a dark wood-grain background. At the top, it says "Time to Tweak the Menu !". Below this is the heading "Update Food Quantity". The form contains three input fields: "Product ID:" with a dropdown menu showing "p12", "Quantity:" with a text input showing "10", and "Transaction Type:" with a dropdown menu showing "Add Stock". Below these fields is a green "Update Stock" button and a "Back to Dashboard" link.

2. Manage Reviews (comment_section.php) :-

The Manage Reviews section allows admins to monitor and manage customer feedback. Admins have the ability to:

- **View Reviews:** The admin can view customer reviews submitted for different products or the café services.
- **Delete Inappropriate Reviews:** If a review is deemed inappropriate or violates the café's guidelines, the admin has the option to remove it from the system.
- **Submit Comments:** Admins can respond to customer reviews by submitting comments. This feature allows the admin to address customer concerns, thank customers for positive feedback, or provide clarifications on any issues.

1. Manage Users (delete.php) :-

The **Manage User** page allows administrators to view and manage registered users on the site. Admins can review user details and have the ability to remove users from the system if necessary, ensuring that only authorized and appropriate users have access to the café's services. This feature helps maintain control over the user base and manage the site's security effectively.

GROUP 21

User ID	Username	Action
2	uoc	Delete
5	ucsc	Delete
10	piyath	Delete
13	isuru	Delete
15	user	Delete
16	nilasi	Delete
18	Sahas	Delete
19	Ama	Delete

User Dashboard (user_dashboard.php) :

If the Role is selected as User, the user is redirected to the User Dashboard, where they can view products and can add comments/feedback on our page (my review) .

1. View Products (products.html) :-

The View Products section allows users to browse the café's available menu items. Users can view product details such as images and prices. This section provides a clear and user-friendly interface for exploring the products before making a purchase.

2. My Reviews (comment_section.php) :-

In the My Review section, users can:

- **Submit Reviews:** After purchasing a product, users can submit their feedback and rate the items they've ordered.
- **View Submitted Reviews:** Users can also view the reviews they've previously submitted, providing them with an overview of their past interactions with the café.

Log Out

The Log Out function is available in both the Admin Dashboard and the User Dashboard. When the log out button is clicked, the current session is securely terminated, and the respective user or admin is redirected to the Home Page (index.html)

DATABASE DESIGN

The database for *Café Reverie*, named "**cafe**", is designed to support the core functionalities of the web application. It consists of three key tables:

1. **new**: This table handles user-related functions such as login, signup, and user management. It stores details like usernames, passwords, and user roles (admin or customer).

```
2 rows in set (0.00 sec)
mysql> select * from new;
+----+-----+-----+-----+
| id | username | password | role |
+----+-----+-----+-----+
| 2 | uoc | uoc | user |
| 3 | imasha | buddhini | user |
| 4 | nick | nickie | admin |
| 5 | ucsc | d89e2ddb530bb8953b290ab0793aecb0 | user |
| 7 | Ann | cd8e7918010a87cc619849e00265c9a6 | admin |
| 9 | manuja | roshana | admin |
| 10 | piyath | abcd | user |
| 11 | tiran | tiran123 | user |
| 12 | sayuni | sayuni123 | admin |
| 13 | isuru | isuru123 | user |
| 14 | admin | admin | admin |
| 15 | user | user | user |
| 16 | nilasi | siyara | user |
| 17 | Tharani | umesha | admin |
| 18 | Sahas | sahas123 | user |
+----+-----+-----+-----+
15 rows in set (0.03 sec)
mysql>
```

2. **comments**: This table is used for managing customer reviews and comments. It allows users to submit feedback and admins to view, respond to, or remove inappropriate reviews.

```
20 rows in set (0.04 sec)
mysql> select * from comments;
+-----+-----+-----+-----+
| comment_id | user_id | comment | created_at |
+-----+-----+-----+-----+
| 1 | 2 | This café has great coffee! | 2024-09-06 09:32:15 |
| 5 | 15 | Love the cakes here! | 2024-09-07 10:50:48 |
+-----+-----+-----+-----+
2 rows in set (0.00 sec)
mysql> select * from new;
```

3. **products:** This table manages the café's inventory, including product details such as names, prices, and stock levels. Admins can update this table to ensure accurate product availability.

```
products' at line 1
mysql> select * from products;
```

product_id	name	price	stock	category
p01	Bread	150.00	103	Baked items
p02	Fish bun	100.00	92	Baked items
p03	Kimbula bun	80.00	100	Baked items
p04	Sausage bun	120.00	92	Baked items
p05	Tea bun	80.00	108	Baked items
p06	Chocolate Ganache	1800.00	92	Cakes
p07	Chocolate Gateaux	1500.00	96	Cakes
p08	Date cake	800.00	100	Cakes
p09	Nougat Gateaux	1200.00	92	Cakes
p10	Ribbon cake	450.00	92	Cakes
p11	Chicken puff	100.00	98	Savouries
p12	Egg and Fish rolls	80.00	92	Savouries
p13	Fish Cutlets	60.00	92	Savouries
p14	Fish Patty	80.00	92	Savouries
p15	Veg Spring rolls	120.00	92	Savouries
p16	Cheese cake	100.00	111	Sweets
p17	Chocolate Donut	150.00	92	Sweets
p18	Chocolate Eclair	80.00	92	Sweets
p19	Chocolate Rocks	80.00	92	Sweets
p20	Ganache Delight	120.00	92	Sweets

```
20 rows in set (0.04 sec)
```

This structure supports seamless user interaction, review management, and product control within the café's system.

CONCLUSION

The development of **Café Reverie** represents a collaborative effort by our team to create an efficient online platform for managing both sales and customer engagement. Through teamwork and idea-sharing, we designed a system that balances user-friendliness with robust functionality. Each member contributed to various aspects of the project, from front-end design to back-end integration, ensuring that the website delivers a smooth and engaging experience for both customers and administrators.

By leveraging HTML, CSS, JavaScript, PHP, and SQL, we built a system that not only allows customers to browse products, and submit reviews but also gives café administrators the tools to manage inventory, handle customer feedback, manage users and oversee daily operations. This dual-focus platform enhances operational efficiency while fostering stronger customer relationships.

As a group project, this endeavor allowed us to pool our skills and ideas, leading to a final product that reflects the strengths and contributions of each team member. Together, we succeeded in creating a comprehensive web application that supports modern café management and provides a solid foundation for future improvements and scalability.
